I. REPORTING SCOPE

This report summarizes development progress completed on **February 25, 2026**. Work covered frontend UX updates, auth restrictions, route behavior, player interaction enhancements, loading experience, and data presentation refinements.

II. COMPLETED UPDATES (TODAY)

A. Authentication and Access Control

- Enforced logged-out access policy: only `/login` and `/register` remain accessible.
- Added route guard behavior to redirect unauthenticated users from protected routes.
- Hid navbar search input when user is logged out.
- Fixed post-login navbar state update without manual refresh.
- Reduced auth flicker in mobile hamburger context.

B. Navbar and Search System

- Replaced separate search-route dependence with in-navbar search workflow.
- Implemented query-driven home rendering: typing search shows results view; clearing query restores home sections.
- Added mobile hamburger menu with responsive navigation actions.
- Fixed mobile icon collision in header.

C. Player Experience Improvements

- Implemented fullscreen, keyboard shortcuts (Space/F), and surface tap-to-play/pause behavior.
- Added icon-based controls for play, seek, mute, and fullscreen.
- Added inactivity-driven hide/show for player overlays.
- Extended inactivity behavior to navbar visibility on player route only.
- Added paused-state cinematic darkening with vignette tuning.
- Restored and synchronized volume slider behavior.

D. Movie Information and Listing Behavior

- Added dedicated `/more-info/[id]` flow and integrated *More Info* navigation.
- Removed raw stream URL from More Info page.
- Restricted ranking badges to Trending section only.
- Added *More to Explore* row for movies excluded from Trending and Latest.

E. Watch Tracking and History

- Enabled watch-history upsert after 20 seconds viewed.
- Marked completion on video end.
- Updated history payload and UI to display movie title and completion status.
- Reworked history page with card-style presentation.

F. Loading and Perceived Performance

- Added route-level and in-page skeleton loading states across all major pages.
- Improved auth form UX with disabled submit and animated loading bar during requests.

G. Styling and Theming

- Added secondary accent token and later changed it to yellow.
- Updated auth button prominence and rounded bordered treatments.
- Added favicon/logo consistency improvements.

III. TECHNICAL VALIDATION

- TypeScript checks were repeatedly executed after key changes.
- Route and UI behaviors were validated interactively (auth gating, search switching, player controls, navbar state).

IV. CURRENT STATUS

Core user flows are now coherent: authentication, route access control, player interactions, search behavior, and movie discovery sections are integrated and aligned with the intended platform experience.
